Forschungsverbund der Goethe-Universität Frankfurt am Main

About TraCe

What effect do global developments such as technologization and climate change have on political violence? How can political violence be limited or legitimized by international institutions? How is it interpreted and justified? Since April 2022, these questions are addressed by the BMBF-funded regional research center “Transformations of Political Violence” (TraCe), in which five Hessian research institutions work together with a variety of disciplinary perspectives.
